RDI-CRE-KIT

Corrosion Detection Kit for your boat or yacht

Identify corrosion problems instantly with the RDI-CRE-KIT. The digital screen offers an easy-to-read display, and each kit comes with a meter, corrosion reference electrode, test leads, and a convenient pouch for easy storage.

The RDI-CRE Corrosion Reference Electrode is included in the kit, and is a professional-grade silver/silver-chloride (Ag/AgCl) reference electrode for performing corrosion potential surveys on boats and yachts. The portable electrode has an integral 20' marine grade cable and is weighted for easy submergence. Used with a digital multimeter, this simple test is a valuable diagnostic tool to identify stray electrical current and provide warning as to the condition of your vessel's zincs and drives. The user guide provides an overview of marine corrosion, troubleshooting techniques and corrosion diagnostics for your boat or yacht.

Electrode Specifications:

- Sensor Dimensions: 1/2" dia. x 3"
- 20' Red Flexible Test Lead Wire
- Weight: 0.5 lbs
- Connector: Banana plug

The RDI-CRE-KIT allows the user to determine the status of the following metals:
Gold, Stainless Steel, Bronze, Copper, Brass, Steel,
Iron, Aluminum, Zinc, Magnesium
